PRACTICAL 12

Event Management System with Secure File Uploads and Admin Authentication

Student Name	KIRTAN KAKADIYA
Enrollment / Roll No.	25CS026
Program / Semester	3RD
Course / Subject	WEB DEVELOPMENT FRAMEWORK
Faculty Name	BRINDA MAM
Submission Date	31-10-2026

1. Aim

To develop an event management module with secure admin authentication, complete CRUD operations for events, and robust file upload validation for event posters using PHP and MySQL.

2. Practical Requirements

- **Admin Authentication & Authorization** – Secure the event management dashboard, allowing only authorized admins to access and modify events.
- **Event CRUD Operations** – Implement Create, Read, Update, and Delete functionality for event records.
- **Secure File Uploads** – Handle poster image uploads securely by validating file types (e.g., JPEG, PNG, GIF) and enforcing server-side file size limits.
- **User Feedback** – Display appropriate dynamic success or error messages for CRUD actions and file upload validations.

3. Required Screenshots / Demonstration

3.1 Admin login and dashboard

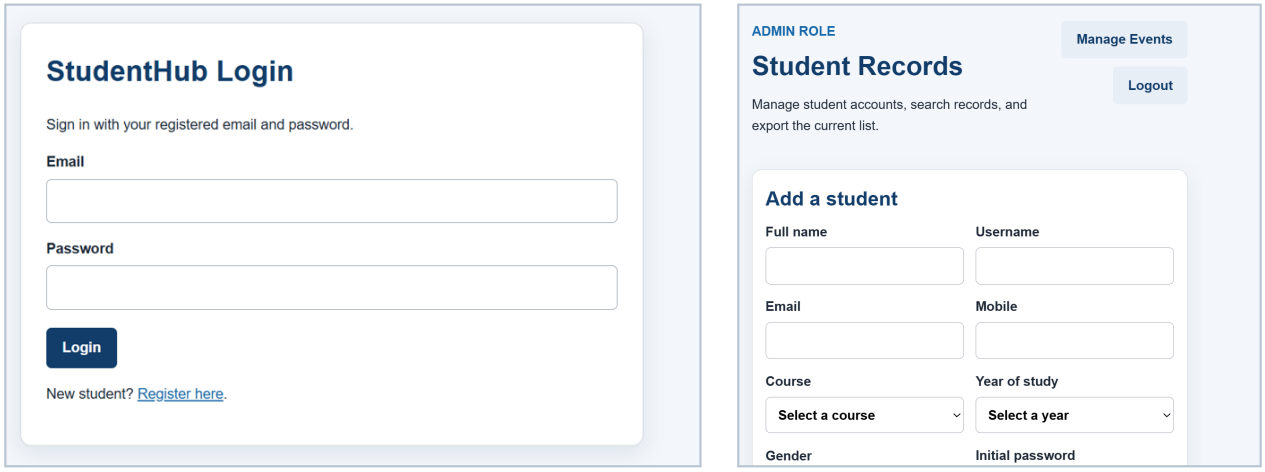

Figure 3.1: Admin login and dashboard

3.2 Successful event creation

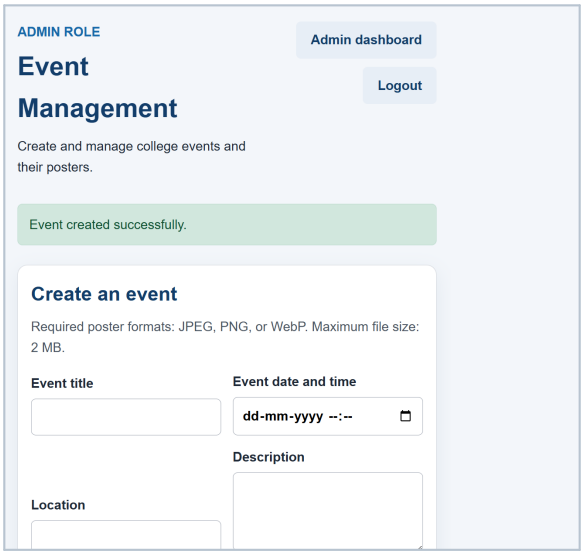

Figure 3.2: Successful event creation

3.3 Event list with uploaded posters

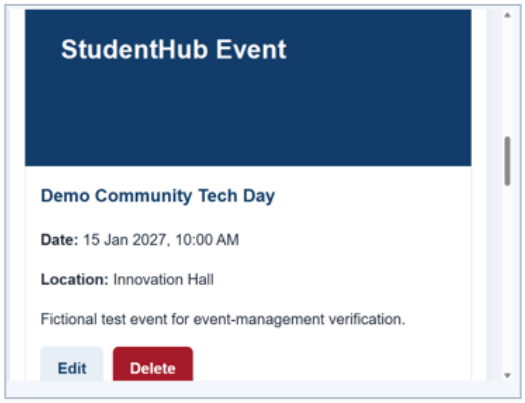

Figure 3.3: Event list with uploaded posters

3.4 Successful event update

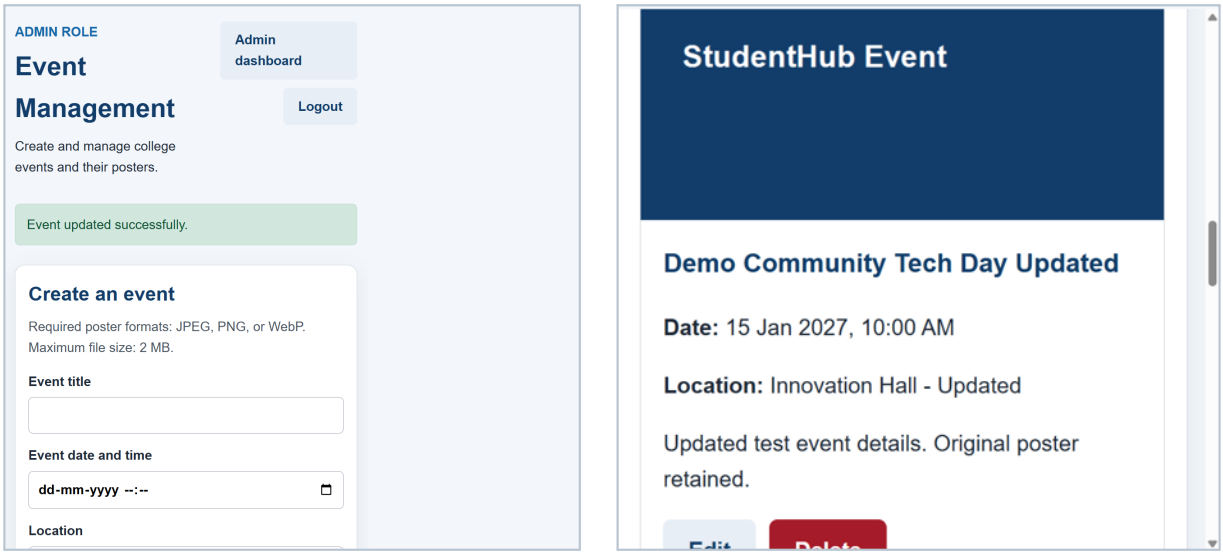

Figure 3.4: Successful event update

3.5 Successful event deletion

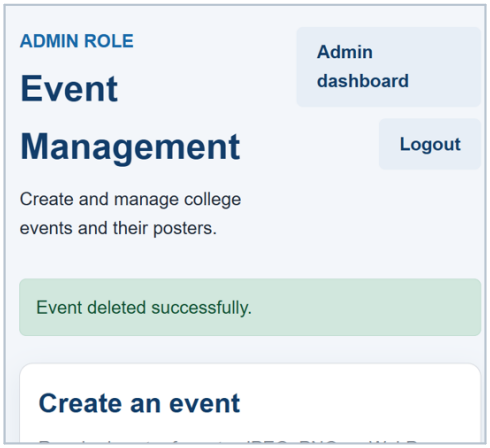

Figure 3.5: Successful event deletion

3.6 Valid poster upload

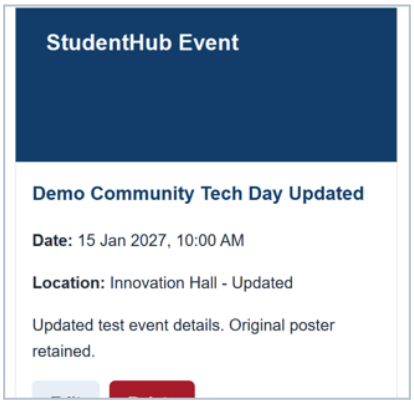

Figure 3.6: Valid poster upload

3.7 Invalid file type validation

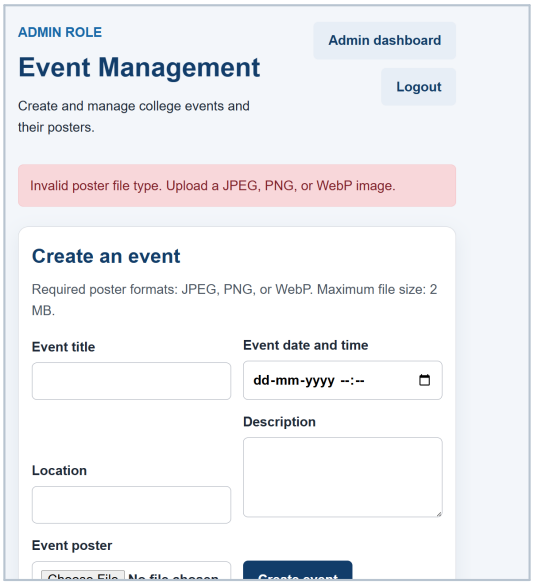

Figure 3.7: Invalid file type validation

3.8 File size limit validation

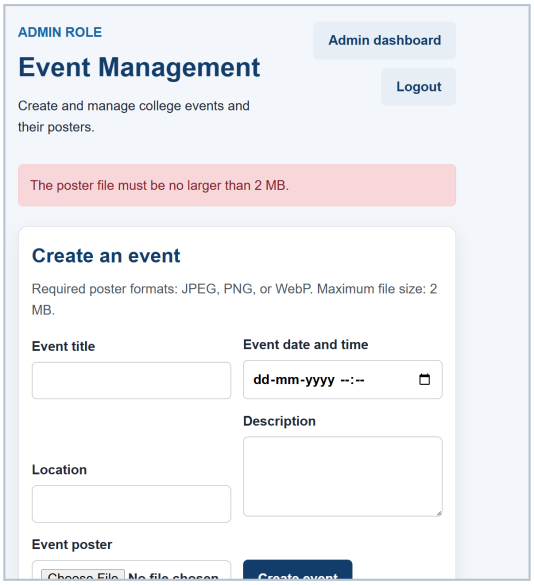

Figure 3.8: File size limit validation

3.9 Success and error messages

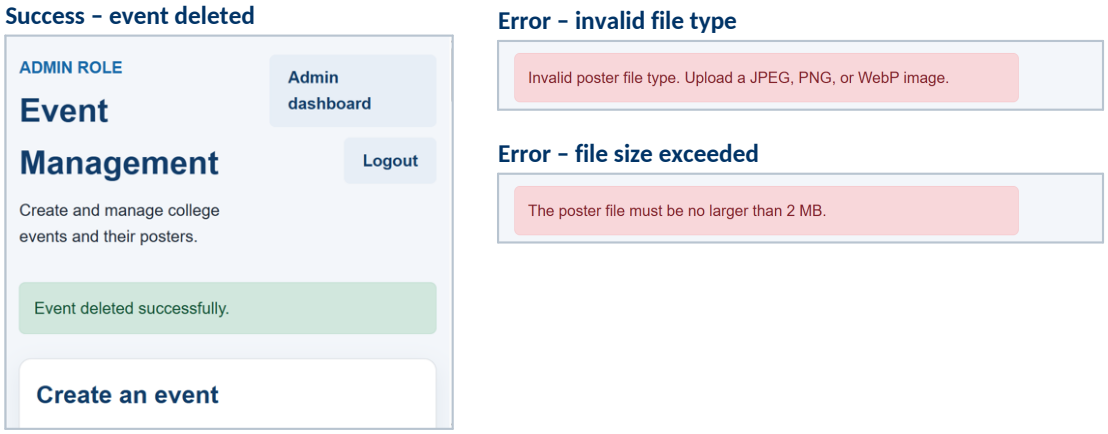

Figure 3.9: Success and error messages

3.10 Unauthorized user access restriction

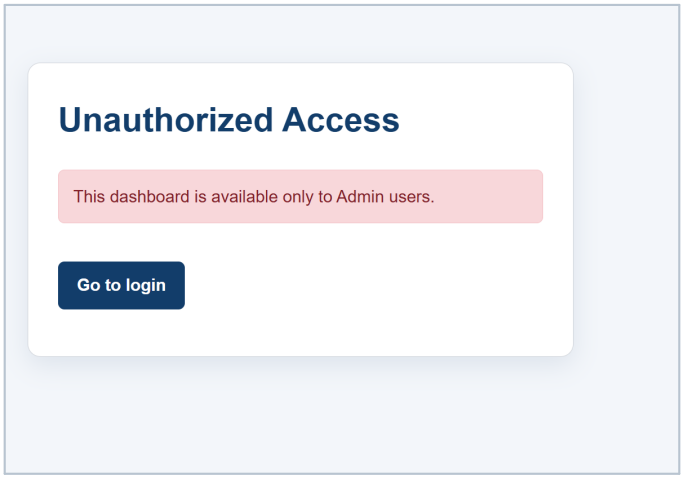

Figure 3.10: Unauthorized user access restriction

4. Result

The event management system was successfully implemented. The admin dashboard is securely restricted to authorized users. Event CRUD operations function correctly, and the file upload mechanism securely validates poster images for appropriate file types and size limits, providing accurate success or error feedback to the user.

5. Conclusion

This practical reinforces essential web development skills, particularly the secure handling of user-uploaded files. Combining authentication with strict file type and size validations ensures the application remains secure against malicious uploads and bloated server storage, while providing a complete, functional administrative interface for event management.
